A.Title: Fission yeast orb6, a ser/thr protein kinase related to mammalian rho kinase and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A;Description: coordinates maintenance of cell polarity during interphase with the c
A;Note: interacts genetically with orb2, which encodes the Pakl/Shk1 protein kinase
C;Superfamily: protein kinase homology
C;Keywords: phosphotransferase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8
                                                                                                                                                                                                                                                                                             442

2003-438978/41. N-PSDB; ACA61394. New human kinase peptides useful as models or targets for the development of therapeutic agents that modulate kinase activity, for eliciting immune response, and in identifying compounds that modulate kinase activity or expression.

Claim 1; Fig 2; 207pp; English.

The invention relates to a novel isolated human kinase. The kinase peptides and nucleic acids are useful as models for the development of human therapeutic targets, in the identification of therapeutic proteins, and serve as targets for the development of human therapeutic agents that modulate kinase activity in cells and tissues that express the kinase. The proteins can be used to raise or to elicit another immune response, as a reagent in assays designed to determine the levels of the protein in biological fluids, as markers for tissue in which the corresponding protein is preferentially expressed, in the identification of modulators of the peptides and in pharmacogenomic analysis. The nucleic acids are transgenic animals expressing all or a part of the nucleic acid, for

     drug screening assays, in assays to determine the biological activity of the protein, to raise antibodies and to elicit another immune response. The antibodies are useful in pharmacogenomic analysis, for inhibiting protein function and for tissue typing. The transgenic animals are useful for studying the function of kinase protein, identifying and evaluating modulactors of kinase protein activity. The invention is also used in gene therapy. The present sequence is the human kinase protein. The human kinase gene is located on chromosome 12
                                                                                                                                                                                                                                                                                                  240

```
The present invention provides a kinase polypeptide and its encoding polymucleotide. The polypeptide and polymucleotide of the invention are useful as models for the development of human therapeutic targets, aid in the identification of therapeutic proteins and serve as targets for the development of human therapeutic agents that modulate kinase activity in cells and tissues that express the kinase. The invention is also useful for biological assays related to kinases, in drug screening assays, for treating disorders characterized by an absence of inappropriate and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           480
                                                                                                                                                                                                                                                                                 The present sequence represents a human citron rho/rac-interacting kinase-short kinase polypeptide. The polynucleotide and polypeptide of the invention are useful in preventing, ameliorating, or treating diseases associated with the polypeptide dysfunction. The expression vector or the reagent is useful in the preparation of a medicament for modulating the activity of a human citron rho/rac-interacting kinase-short kinase in a disease, such as obesity or chronic obstructive pulmonary disease. These may also be used for treating obesity/ overweight-associated comorbidities, such as hypertension, diabetes, coronary artery disease, hyperlipidaemia, stroke, gallbladder disease, gout, osteoarthritis, sleep apnea, cancer, thrombolic diseases, polycystic ovarian syndrome, reduced fertility, and depression
                                                                                                                                                                                                                                                                                       kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  480

The invention relates to human kinase PKIN proteins and their corresponding cDNAs. A composition associated with decreased expression of treating a disease or condition associated with decreased expression of PKIN and a composition comprising PKIN antagonist is useful for treating a disease or condition associated with overexpression of PKIN. The disease or condition associated with overexpression of PKIN. The clisociate include cancer (leuksemia, adenocarcinoma, lymphoma, melanoma, allergies, adult respiratory distress syndrome, autoimmune thyroiditis, gout, bronchitis, Crohn's disease, disbetes autoimmune thyroiditis, gout, bronchitis, Crohn's disease, disbetes mellitus, multiple sclerosis, Good pasture is syndrome, gravelitis, ulcerative colitis, relevanted arthritis, slogren 's syndrome, uveitis, ulcerative colitis, bacterial, parasitic, fungal, viral, protozoal and helminthic infections growth and development disorders (arteriosclerosis, cirrhosis, hepatitis, aneurysms, congestive heart failure, angina pectoris, myocarditis, aneurysms, congestive heart failure, angina pectoris, myocarditis, consense (atteriovenous fiscula, hypertension, vasculatis, lipid disorder (fatty liver, Fabry's disease, ulceman-Pick's disease, chronic bronchitis, lumours); lipid disorder (fatty liver, Fabry's disease, Niemann-Pick's disease, chronic bronchitis, lumours); lipid clisocher test compound and in gene therapy. RESULT 6 ABU10127

New polypeptides, useful for diagnosing, treating or preventing disorders of growth and development, cardiovascular and lipid, and diseases such as

WPI; 2002-090207/12 N-PSDB; AAD26454.

```
The invention relates to a novel isolated human kinase. The kinase peptides and nucleic acids are useful as models for the development of human therapeutic targets, in the identification of therapeutic proteins, and serve as targets for the development of human therapeutic agents that modulate kinase activity in cells and tissues that express the kinase. The proteins can be used to raise or to elicit another immune response, as a reagent in assays designed to determine the levels of the protein in biological fluids, as markers for tissue in which the corresponding protein is preferentially expressed, in the identification of modulators of the peptides and in pharmacogenomic analysis. The nucleic acids are useful as hybridisation probes, in constructing vectors, host cells or transgenic animals expressing all or a part of the nucleic acid, for monitoring the effectiveness of modulating compounds on the expression or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New human kinase peptides useful as models or targets for the development of therapeutic agents that modulate kinase activity, for eliciting immune response, and in identifying compounds that modulate kinase activity or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              present sequence is not shown in the specification but indexer using the information given in figure 3
                                                                                                                                                                                                                                                                      /note= "Wild-type Trp substituted by Cys as a result of single nucleotide polymorphism"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                activity of the transporter gene in clinical trials or in treatment regimen, in gene therapy and as antisense constructs to control transporter gene expression in cells, tissue and organisms. The present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New human citron rho/rac-interacting kinase-short kinase polypeptide ar polynucleotide for preventing or treating diseases associated with the polypeptide dysfunction, e.g. obesity or chronic obstructive pulmonary disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents a human citron rho/rac-interacting kina-short kinase polypeptide. The polynucleotide and polypeptide of the invention are useful in preventing, ameliorating, or treating diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             chronic obstructive pulmonary disease; hypertension; diabetes; coronary artery disease; hyperlipidaemia; stroke; gallbladder disease; gout; osteoarthritis; sleep apnea; cancer; thrombolic disease; polycystic ovarian syndrome; fertility; depression.

New NOVX polypeptides and nucleic acids, useful for diagnosing, preventing or treating NOVX-associated disorders, e.g. diabetes, obesity, cancer or dyslipidemia, and in chromosome mapping, tissue typing or pharmacogenomics

Claim 1; Page 100-101; 586pp; English

The present invention describes NOVX proteins, where X can be 1 to 55
CC (e.g. NOV1). Also described: (1) a composition comprising a polypeptide
described above and a carrier; (2) a kit comprising in one or more
CC containers, the composition described above; (3) an isolated nucleic acid
molecule which encodes a NOVX protein of the invention; (4) a vector
CC comprising the above vector; (6) an antibody that immunospecifically
binds to the polypeptide described above; (7) methods for determining the
CC presence or amount of the above polypeptide or nucleic acid molecule in a
sample; (8) methods for determining the presence of or predisposition to
a disease associated with altered levels of expression of the above
CC diseatifying an agent that binds to the polypeptide described
above; (10) a method for identifying a potential therapeutic agent for
cuse in treating a pathology that is related to an aberrant expression or
aborrant physiological interactions of the polypeptide, (11) a method of
cc above; (10) a method for identifying of the polypeptide; (11) a method of
cc apathology associated with the polypeptide; (11) a method of
cc are publication of activity or of latency or predisposition to
cc a pathology associated with the above polypeptide. NOVX
cs preventing a pathology passociated with the above polypeptide in a
cc mammal; and (14) a method for producing the above polypeptide. NOVX
cs gequences have antidabetic, anorectic, antibacterial, virucide,
confinityaemic activities, and can be used in gene therapy. The
colypeptide is useful in manufacturing a medicament for treating a
colypeptide is useful in manufacturing a medicament for treating colypeptide associated with a human disease. The polypeptide or the mucleic
cacid molecule may be disease uch as Alzheimer's disease or perkinson's
cc disease, immune disorders such as Alzheimer's disease or perkinson's
cc disease, immune disorders such as Alzheimer's and each or perventive medicine and
cp pragentice in particulation.
CC dyslipidaemias. The nucleic aci

The invention relates to a novel human protein that shares structural similarity with animal kinases, including serine-threonine kinases, particularly ditron rho-interacting kinases. The proteins of the invention have nootropic and cytostatic activity. The polynucleotides may have a use in gene therapy. The encoded novel polypeptides are useful for generating antibodies, as reagents in disagnostic assays, for identifying other cellular gene products related to NHP and as reagents in assays for screening for compounds that are useful in the treatment of mental, 424 120 61 ECSQPALMKIKHVSNFVRKYSDTIAELQELQPSAKDFEVRSLVGCGHPAEVQVVREKATG 120 121 DIYAMKVMKKKALLAQEQVSFFBEBRNILSRSTSPWIPQLQYAFQDKNHLYLVMEYQPGG 180 361 SKIDWNNIRNSPPPFVPTLKSDDDTSNFDEPEKNSWVSSSPCQLSPSGFSGEELPFVGFS 420 9 9 in gene kinase; enzyme; serine-threonine kinase; nootropic; cytostatic; rho-interacting kinase; gene therapy; mental disorder; cancer. 365 SKIDWANIRNSPPPFVPTLKSDDDTSNFDEPEKNSWVSSSPCQLSPSGFSGEELPFVGFS 1 MLKFKYGARNPLDAGAAEPIANRASRLNLFFQGKPPFWTQQQMSPLSREGILDALFVLFE 1 MLKFKYGARNPLDAGAAEPIASRASRLNLFFQGKPPFWTQQQMSPLSREGILDALFVLFE 61 ECSQPALMKIKHVSNFVRKYSDTIAELQELQPSAKDFEVRSLVGCGHFAEVQVVREKATG Gaps Novel polynucleotide encoding human proteins that are structurally similar to animal kinases, useful for drug screening, diagnosis, it therapy of disorders and diseases e.g. cancer and pharmacogenomic applications. biological or medical disorders and diseases including cancer. ```

The invention relates to a novel human protein that shares structural similarity with animal kinases, including serine-threonine kinases, particularly citron rho-interacting kinases. The proteins of the invention have nootropic and cytostatic activity. The polynucleotides may have a use in gene therapy. The encoded novel polypeptides are useful for generating antibodies, as reagents in diagnostic assays, for identifying other cellular gene products related to NHP and as reagents in assays for screening for compounds that are useful in the treatment of mental, biological or medical disorders and diseases including cancer. The sequence represents a novel human kinase of the invention

 reagent is useful in the preparation of a medicament for modulating the activity of a human citron rho/rac-interacting kinase-short kinase in a disease, such as obesity or chronic obstructive pulmonary disease. These may also be used for treating obesity/ overweight-associated comorbidities, such as hypertension, diabetes, coronary artery disease, hyperlipidaemia, stroke, gallbladder disease, gout, ostecarthritis, sleep apnea, cancer, thrombolic diseases, polycystic ovarian syndrome, reduced fertility, and depression
                                                                                                                                                                                                                                                                                                                                                                                                                                   360

The invention relates to isolated NoVX polypeptides and polymucleotides.

NoVX polypeptides and polymucleotides are used to prevent, diagnose or treat a medical condition in human related to the abberrant expression and activity of NoVX polypeptides.

Co treat a medical condition in human related to the abberrant expression and activity of NoVX by supplementing the patient our production or to rectify mutations. Conversely, antisense NA molecules production or to rectify mutations. Conversely, antisense NA molecules may be administered to down regulate expression of NOVX polypeptides by binding with the cells own genes and preventing their expression. NOVX polymucleotides and complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar sequences in samples, and so which patients may be in need of restorative therapy. NOVX polypeptides may also be used as antigens in the production of antibodies and in assays to identify of NOVX. The anti-NOVX polypeptide antibodies, agonists and antagonists and antagonists and antagonists and antagonists and activity of NOVX. Co lead to modulate NOVX polymucleotide expression and activity of NOVX polypeptides. The anti-NOVX polypeptide antibodies, agonists may also be used as diagnose and treat: metabolic disorders, diabetes, obesity, infectious diagnose and treat: metabolic disorders, diabetes, obesity, infectious disorders, alzheimer's Disease, parkinson's bisorder, immune disorders, haematopoietic disorders, and the various dyslipidaemias, metabolic disorders, and the various dyslipidaemias, metabolic disturbances associated with chronic diseases and various cancers.

They may also be used as antibacterial agents. The present sequence of a human NOVX protein.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

catherosclerosis, multiple sclerosis, psoriasis), disorders affecting growth and development (e.g., arreriosclerosis, cirrhosis, hepatitis), cardiovascular disorder (e.g., hypertension, myocardial infarction, Goodpasture's syndrome), and a lipid disorder (e.g., fatty liver, Gaucher's disease, Niemann-Pick's disease, hypercholesterolaemia, hypertipidaemia, obesity), and for assessing the effects of exogenous compounds. Anti-PKIN antibody is useful in a disquostic test for a condition or a disease associated with the expression of PKIN in a condition or a disease associated with the expression of FKIN in a antegonist of PKIN is useful for treating a disease or condition associated with decreased or increased expression of functional PKIN. CHIN is useful in a number of drug screening techniques and to analyse the proteome of a tissue or cell type. PKIN DNA is useful for creating knockin humanised animals or transgenic animals to model human diseases, and in somatic or germline gene therapy. The present sequence is human

                                                                                                                                                                                                                                                           셤
                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated polymucleotide encoding a human citron rho/rac-interacting kinase polypeptide. The isolated cutron rho/rac-interacting kinase polypeptide. The isolated given in the specification. The human citron rho/rac-interacting kinase (CRIK) polypeptide and polymucleotide are useful in preventing, ameliorating, or treating diseases associated with human CRIK dysfunction such as obesity and obesity-associated comorbidities (e.g. hypertension, coronary artery disease, hypertipidaemia, stroke, gout, osteoarthritis, some types of cancer including endometrial. Dreast, prostate and colon cancer), anorexia, cachexia, bullmia, central nervous system disorders (e.g. mood disease), chronic obstructive pulmonary disease, or diabetes. These can also be used to treat pain associated with the disorders. The human CRIK polypeptide is also useful in diagnostic assays or in genetic testing. The expression vector or the reagent is useful in a disease, e.g. obesity, a central nervous system disorder, or chronic obstructive pulmonary contral nervous system disorder, or chronic obstructive pulmonary disease. The fusion protein is useful for generating antibodies against a cancer language of the contral nervous system disorder, or chronic obstructive pulmonary contral nervous system in various assay systems. The methods are useful in producing and detecting the polymucleotide and polypeptide and polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240

(MDPK) polypeptides designated as 13245 and nucleic acid molecules encoding such polypeptides. 13245 molecules are used to develop diagnostic and therapeutic agents for prognosticating, diagnosting, preventing, inhibiting, alleviating or curing MDPK-related diagnostic. Polypeptides of the invention are used to develop diagnostic and therapeutic agents for 13245-mediated or related disorders such as tumourigenesis, tumour agrowth, tumour metastasis, viral infection of a cell, skeletal muscle disorders (e.g. muscular and myotonic dystrophies), immune disorders and neoplastic disorders. The invention is also used in gene therapy. The present sequence is human MDPK protein
                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pain modulation; pain disorder; painful disorder; potassium channel; kinase expression; inflammatory pain; chronic pain; neuropathic pain; causalgia; fibromyalgia; cancer pain; migraine; headache; tissue pain; analgesic; antiinflammatory.

The present invention relates to a method for identifying a compound capable of modulating pain or painful disorders. The method comprises assaying the ability of the compound to modulate specific nucleic acid expression or polypeptide activity e.g. potassium channel, or kinase expression/activity. The method and compounds are useful for treating pain or painful disorders e.g. inflammatory pain, chronic pain, neuropathic pain, causalgia, fibromyalgia, cancer pain, migraine/headache pain and tissue pain. The present sequence represents a human protein associated with pain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120
